Dear Mr. Lopes:

The South Coast Air Quality Management District (SCAQMD) has reviewed your plan application submitted under Application No. 517166 for Rule 1146 compliance that was received on December 14, 2010. The compliance plan is approved based on the information submitted in your plan application that indicates how your Group III boiler (Permit No. F47283) will achieve compliance with Rule 1146. In accordance with your selection, you shall come into compliance with an oxides of nitrogen (NOx) limit of 9 ppm or less on or before January 1, 2013.

To comply with these rule requirements, any boiler modifications such as replacement of existing burners, installation of exhaust after reatment control equipment, or replacement of the boilers may only take place after application submittal and approval in writing by the SCAQMD prior to any of these activities taking place. Application for the alteration/modification of the boiler shall be submitted on or before January 1, 2012.

If you have any questions, please contact Mr. Stephen Jiang at (909) 396-3134.

SECTION K: TITLE V Administration

- (B) Other deviations from permit or applicable rule emission limitations, equipment operating conditions, or work practice standards, determined by observation or by any monitoring or testing required by the permit or applicable rules that result in emissions greater than those allowed by the permit or applicable rules shall be reported within 72 hours (unless a shorter reporting period is specified in an applicable State or Federal Regulation) of discovery of the deviation by contacting AQMD enforcement personnel assigned to this facility or otherwise calling (800) CUT-SMOG.
- (C) A written report of such deviations reported pursuant to (B), and any corrective actions or preventative measures taken, shall be submitted to AQMD, in an AQMD approved format, within 14 days of discovery of the deviation.

The operator shall not discharge into the atmosphere from this equipment, particulate matter in excess of the concentration at standard conditions, shown in Table 404(a). Where the volume discharged is between figures listed in the Table, the exact concentration permitted to be discharged shall be determined by linear interpolation.

For the purposes of this rule, emissions shall be averaged over one complete cycle of operation or one hour, whichever is the lesser time period.

FACILITY PERMIT TO OPERATE FOAM FABRICATORS

APPENDIX B: RULE EMISSION LIMITS [RULE 405 02-07-1986]

The operator shall not discharge into the atmosphere from this equipment, solid particulate matter including lead and lead compounds in excess of the rate shown in Table 405(a).

Where the process weight per hour is between figures listed in the table, the exact weight of permitted discharge shall be determined by linear interpolation.

For the purposes of this rule, emissions shall be averaged over one complete cycle of operation or one hour, whichever is the lesser time period.
